

## **Ar. Parag rawool**

(B.Arch, M.Arch, Sustainable Architecture)  
Associate Professor, AIKTC, SoA

Parag has studied architecture from Sir J J School and did masters in Sustainable Architecture from CEPT University (2011-2013). He believes in working with natural building materials like bamboo, mud and that it is important to respond to the local context for a sensible and sustainable approach towards the building. Locally sourced and sometimes unconventional materials often become essential to this process. He is deeply inspired by Ar. Nari Gandhi's work with his material palette and experimentation. On the other end, he has worked with Ar. Leo Pereira whose design incorporates values of natural light and ventilation to a humanized scale to make a functional design. He has also been associated with Thumb Impression collaborative where he worked on several projects and has explored bamboo as a building material. He has conducted workshops on Bamboo and climate responsive architecture for students and professionals. Lately, he had taught at Indus University, Ahmedabad focusing on Studio and construction based subjects. He is also a vivid reader and a calligraphy artist. He plays various musical instruments like guitar, harmonica.
